REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: the prior art of record does not disclose or fairly suggest the present invention. The closest prior art, Sano et al (5,948,862), discloses a golf ball comprising a core, an intermediate layer, and a cover layer, which is identical to the structure of the instant invention. Sano discloses the intermediate layer may include at least two of the following ingredients: A) an ionomer, B) a thermoplastic elastomer having terminal OH groups, and C) epoxy containing polymers. The present invention also claims an intermediate comprising a functional group modified resin as a main component, which is equivalent to ingredient B of Sano. However, the materials in the respective cover layers are distinct. Sano discloses the cover layer may be made from an ionomer and may be chosen from ingredient A in the intermediate layer. The present invention requires the cover to be made from a material that will increase in the adhesion between the intermediate and cover layers. In particular applicant claims a cover composition comprising a resin having a polar site that can react with the modified functional group of the resin in the intermediate layer. Sano does not disclose or fairly suggest a specific type of resin for increased adhesion between the layers.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
